

## Electronic Monitoring Bracelet Notes

- \*Do not have bracelet submerged in any water, i.e. bath/pool/hot tub/ocean etc. Showers are fine. It is encouraged to clean around your bracelet while showering in order to reduce any build up to avoid skin rash. Pat dry gently.\*
- \*Do not charge your bracelet while you are sleeping\*
- \*Do not wear the charger on the bracelet outside of the house, only charge it when you are at home. No exceptions considering this can be a violation of conditions.\*
- \*A good time to charge your bracelet is typically around 730/8pm\*
- \*Only charge the bracelet for 2-2.5 hours every day, no need to wear it for longer than that unless directed by CWAEM\*
- \*You should receive a text when your battery is below 40% and it's time to charge and another at 30% when charging is a MUST\*
- \*Make sure when you're charging the bracelet and/or returning the charger to the dock on the wall, that it is firmly in place and connected otherwise this can lead to a non-charged bracelet and/or a non-charged charger\*
- \*Not having a charged bracelet can lead to a violation of your conditions so please follow the guidelines you are given on how to keep it charged\*
- \*Should you have questions how to put it on, charge it, etc. you can contact CWAEM to make sure you have your questions and concerns answered\*
- \*For ALCOTAGs (Alcohol) only, **DO NOT** put anything in between your skin and the device.\*  
Also avoid any hygiene or personal products, like lotions, colognes, and perfumes, that contain alcohol, especially on areas near the bracelet.  
Avoid certain cleaning products as well, like Pine Sol for example.
